

Cloudflare Tunnel Setup Guide (No Domain Needed)

Step 1: Start a local server Example: `python -m http.server 3000` Then open `http://localhost:3000`

Step 2: Install cloudflared Download from Cloudflare official site or install via package manager.

Step 3: Login Run: `cloudflared tunnel login` Authorize in browser.

Step 4: Create tunnel Run: `cloudflared tunnel --url http://localhost:3000`

Step 5: Use public URL You will get a link like: `https://random.trycloudflare.com`

SSH Setup (Optional) Run: `cloudflared tunnel --url ssh://localhost:22` Then connect: `ssh user@hostname -p PORT`

Notes: - Keep laptop ON - Link changes every time - Keep terminal open
